NEWS

Thanks to our customers, we are always developing something new for you

A new development

The 3-point system

**A flexible further development
suitable for tunnels 2.3m & 3m**

This 3-point machine was developed and built in cooperation with Markus Bischofberger (customer), Andreas Fuchs (designer) and Marcel Stähli (turner specialist). Here it is shown with an AEBl transporter.

Your advantage

A great advantage of this machine is its compact length (< 2m).
The total weight is reduced to less than 2.5 t. (TG 301).
The 3-point beam fits both tunnel models TG 231 & 301.

Prerequisite for the tractor

3-point TG 231 is suitable for tractors from 75 hp.
3-point TG 301 is suitable for tractors from 125 hp.

Irrigation

Since soil nutrition cannot be produced without water, there are several options. Ask for the most ideal solution. We will be happy to advise you.
