

Environmental and  
composting technology

**Produce high-quality soil nutrition in the  
shortest possible time**

We have the right machine for everyone  
from 300 m<sup>3</sup> to 800 m<sup>3</sup> per hour  
with optimal accessories

**Compost turner  
Irrigation modules  
Screening units**

# NEWS

Thanks to our customers, we are always developing something new for you

## SGF2600 - The new machines in two models: diesel or electric drive

For piles up to 2.7 m  
With 4-wheel drive

Hegglin in Hüneberg - The SGF2600 E operating on solar power from its own roof

### Advantages

The machine can move pile widths of up to 2.7 meters with a capacity of 1.6 m<sup>3</sup> / running meter. This corresponds to approximately 500 m<sup>3</sup> / hr. Both machines operate with a 4-wheel drive. The diesel version is equipped with a 75 hp engine with particle filter.

The electric motor also drives the hydraulic pump. Our customer, shown in the picture, obtains his electricity from the machine's own solar collector.

### Drive variants

**Diesel engine:** 75 hp – with particle filter

**Electric motor:** 35 kW / 400 V incl. hydraulic pump drive  
Connection: 85 A socket

### Irrigation

Since soil nutrition cannot be produced without water, there are several options. Ask us for the most ideal solution. We will be happy to advise you.
