NEWS

Thanks to our customers,
we are always developing
something new for you

A new development

The 3-point system

A flexible further development suitable for tunnels 2.6m & 3m

This 3-point machine was developed and built in cooperation with Markus Bischofberger (customer), Andreas Fuchs (designer) and Marcel Stähli (turner specialist). Here it is shown with an AEBI transporter.

Your advantage

A major advantage of this machine is its compact length. (< 2m)
The total weight is reduced to less than 2.5 tonnes. The 3-point support fits both tunnel models TG 263 & 303.

Prerequisite for the tractor

3-point TG 263 is for tractors from 110 hp with min. 3 t payload
3-point TG 303 is for tractors from 125 hp with min. 3.5 t payload

Irrigation

Since soil nutrition cannot be produced without water, there are several options. Ask for the most ideal solution.

We will be happy to advise you.
